Webinar Title: Asset Performance Management

Registration Fee (including GST):- Rs.99/-

About Webinar Program -
Asset Performance Management (APM) is a tool/method/software and a way to manage your plant operational assets across the enterprise – be it critical or otherwise. With increasing complexity of the deployed solution (system of systems!!) consisting of a host of sensors, hardware, equipment, IT and networking infrastructure, software and involvement of various functions/departments including Operations, Maintenance, Engineering, IT, HSE and others - APM leverages the technologies and complexity of deployment to the benefit and realize more value to customers with their current and future investments. Streamlined operations, 24x7 visibility, being on top of asset health and in control of risks and asset strategies and scaling them up across the enterprise are some factors driving APM adoption.

Webinar Course Coverage:-
The webinar will cover following points -
- Asset Performance Management (APM): Some definitions and concepts
- Need for asset Performance Management
- Key elements of an APM
- Typical architecture of an APM
- Technologies used in APM
- A look at current players
- Choosing or implementing APM

Register to learn:-
- Differences between APM and other evolving technologies
- Understand where and when to use APM

Thanks & Regards
NPC Team
