Analytical thinking skills are critical in the workplace. It is essential for gathering data, solving complex problems, making rational decisions, as well as summarizing data and executing well-thought-out projects.

Webinar Coverage:

This online workshop will help participants understand the importance of having analytical skills and using analysis to find solutions to various problems and make concrete decisions and action plans to solve those problems. Participants will be able to identify relevant information, categorize it and make difficult decisions using views from multiple perspectives.

★ Participants will be provided E-Certificate towards Participation
