

# Webinar Title: “Asset Performance Management”

**Expert Speaker – Girish Aralikatti, Principal Consultant – Aum Universal**

**Webinar Date:** 14/08/2020 | **Time:** 2 PM | **Duration:** 1 Hr. 30 Min.

## About Webinar:

Asset Performance Management (APM) is a tool/method/software and a way to manage your plant operational assets across the enterprise – be it critical or otherwise. With increasing complexity of the deployed solution (system of systems!!) consisting of a host of sensors, hardware, equipment, IT and networking infrastructure, software and involvement of various functions/departments including Operations, Maintenance, Engineering, IT, HSE and others - APM leverages the technologies and complexity of deployment to the benefit and realize more value to customers with their current and future investments. Streamlined operations, 24x7 visibility, being on top of asset health and in control of risks and asset strategies and scaling them up across the enterprise are some factors driving APM adoption.

## Webinar Coverage:

The webinar will cover following points -

- Asset Performance Management (APM): Some definitions and concepts
- Need for asset Performance Management
- Key elements of an APM
- Typical architecture of an APM
- Technologies used in APM
- A look at current players
- Choosing or implementing APM

## Speaker Profile:

Girish Aralikatti is an industry professional with more than 30 years of experience in product development and engineering of embedded systems, software, cyber security, and design, solution architecture & deployment of IIoT systems. After working in companies of all sizes - small, mid, and large, including at GE India for 19 years, he setup Aum Universal in 2019 to help the regional industries benefit from newer technologies.

## Key Learnings:

- ✓ Differences between APM and other evolving technologies
- ✓ Understand where and when to use APM
