JIT WEBINAR SERIES

- Processes are a series of activities designed and have input (s) and output (s).

- Processes are the infrastructure of an organisation and are the primary pipeline through which work flows.

- Process analysis is one of the most important techniques/tools available to an organisation. It is important for any improvement project, and should precede any systems implementation.

- In Process Analysis, entire process flow of an organization is reviewed to arrive at a detailed understanding of the process. It helps in making process improvements through reducing/ eliminating unnecessary activities, wastages.

SPEAKER

Shri Alok Srivastava
Director (Grade-II)
National Productivity Council
