Webinar

Synchronous Management - TOC application in manufacturing with practical case studies

07th of August 2020, 10:30 AM – 12.00 Noon

About Webinar

Synchronous Management is an application of the Theory of Constraints in an organization. This webinar aims to give participants a quick overview of this approach and also some insight on how it can be a superior alternative to concepts such as ERP, MRP, JIT, Six Sigma, etc. The main aim of this webinar is to introduce participants to the concept of Synchronous Management and to develop an understanding as to how it can be applied in an organization with practical case studies.

Webinar Coverage

- Introduction
- The Goal of an organization
- The measurement system
- Basic Principles
- The Drum - Buffer - Rope Approach
- A Logical Approach to Continuous Improvement
- Different Plant Types & their Characteristics
- Success stories and Examples
- Frame Work for Implementation in manufacturing, process and project organizations
