### *E-Certificates to be issued on participation*

**ABOUT WEBINAR:** -It has been accepted that the development process has not remained sustainable so far and has deteriorated environment significantly. The uncontrolled consumption of natural resources and indiscriminate disposal of wastes have caused irreparable damage to the environment. Waste Minimization, whose objective is to minimize wastes and improve the process practices/cycles to optimize resource utilization, regarded as the vital tool to increase Productivity as well as achieve Sustainable Development, and has been accepted worldwide as an approach to overcome the drawbacks of the End-of-Pipe (EoP) treatment and also to tap the potential, increasing the profitability of the units and protecting the environment. However, due to the increased consumption and ever increasing cost of resources, the industries have to realize the importance of preventive environmental strategies i.e. Waste Minimization.
