Program Fees: Rs. 590/- (Including GST)

About Webinar

Lean Healthcare Management is the application of Lean Ideas in the Healthcare facilities to minimize waste in the care delivery processes and add value to the patients.

The core concept of Lean Healthcare is to identify which actions add value to the patient, which actions do not add value to the patient and which measures could be improved in the entire patient journey through various departments such as OPD, ED, OT, IPD and other allied departments such as Clinical Laboratory and Diagnostics.

The people who do the work viz., Physicians, Nurses, Quality Professionals, Medical assistants, are in the best position to innovate the processes to make them easier to do the work and deliver value to the patients. The central principles of Lean Healthcare Management are Continuous Improvement, Value creation to the patient through waste elimination, Visual management, and working in cross functional teams to ensure safe care delivery and the best patient outcomes as well as to improve the overall profitability and sustainability of the Healthcare Organizations.

Webinar Coverage:

- Introduction to Lean Healthcare Management / 8 Wastes in Healthcare
- 5S for Hospitals / Healthcare Kaizen
- Clinical Value Stream Mapping (VSM)
- FMEA in Healthcare-Case Study /Quick Change Overs in Healthcare (QCO)
